EDUCATION

The University of Chicago

Master of Science in Computer Science

Coursework: Distributed Systems, Functional Programming

Chicago, IL

June 2026 (Expected)

The University of Chicago

Bachelor of Science in Computer Science, Bachelor of Arts in Economics

Coursework: Machine Learning for Systems, Operating Systems, Databases, Networks

GPA: 3.7/4.0, National Merit Scholar

Chicago, IL

June 2025

PROFESSIONAL EXPERIENCE

Amazon

Software Engineer L4.

Detroit, MI

June 2025 – September 2025

- Created deployable banner on Amazon Seller and Vendor Central homepages, serving action recommendations to average 3.6M unique Selling Partners per month; reduced average homepage incident response time 6 hours to <10 mins, cutting average Selling Partners affected per SEV issue by 80K.
- Developed a Java API to integrate internal databases and configuration resources in backend from multiple teams, enabling the addition of new banner elements to the existing frontend webpage.
- Submitted and evaluated 40+ Java code requests working under Agile sprint workflows.

Enklu

Software Engineer

Chicago, IL

June 2024 – September 2024

- Supported Primal Ranch game release by adding gameplay updates and leading QA efforts which generated 1K+ hours of in-game time, \$36K in revenue, and 600+ new customers over 3 month period.
- Developed internal API to track multiplier user metrics such as player count and playthrough rate, informing research and development team of how to better develop game strategies.
- Used C# and Node.js to push gameplay updates, enhance mixed reality headset gameplay smoothness, and implement bug patches across multiple games on the backend code platform.

Code Your Dreams

Computer Science Intern

Chicago, IL

June 2023 – August 2023

- Created 16 lessons of Python curriculum instructing creation of WhatsApp text bot using Flask APIs to supply as teaching material for ~80 internationally located volunteer instructors.
- Designed Arduino DanceTech Fusion project combining STEM and dance arts through LED bulb control algorithms to increase participation in coding education for 25+ humanities students in inaugural year.
- Led virtual onboarding demos of curricula to 40+ teachers in Burundi, Africa, boosting program usage.

PROJECT EXPERIENCE

Sushi Kitchen Simulator

June 2023 – September 2023

- Created cooking simulator Python game employing common data structures and object-oriented coding principles.
- Utilized Agile software engineering cycle to balance design, coding, and asset creation in a limited timeframe.

Digital Board Game with Dynamic Board Sizing

February 2023 – April 2023

- Designed and developed scalable Python Checkers game with game logic, visual interface, and bot player.
- Implemented GUI through unit testing and Git workflow to coordinate with other team members' infrastructure.

SKILLS

Technical Languages: Python, Java, C, C#, C++, SQL, Haskell, x86 Assembly, JavaScript

Software/Tools: Git, SVN, Linux, VS Code, Google Workspace, Docker, WPF, R, Stata

Libraries/Frameworks: numpy, pandas, pygame, flask, matplotlib

Other Activities: Trumpet Player, Esports Competitor, Basketball Player, Bowler
